## Takhleeq ++

### 1. Language overview

Takhleeq ++ is a uniquely designed urdu inspired programming language that merges creativity with logic. It uses transliterated Urdu words for control structures, functions, and input/output commands. The main goal is to make programming intuitive for urdu-speaking learners while keeping the structure close to c++.

In Takhleeq ++, programmers write logic statements in natural Urdu flow, this helps build confidence before shifting to English based language.

Example:

c++ code:

```
if (num>0) {  
    cout << "Positive"; }
```

Takhleeq ++ equivalent:

Takdeeq ++ equivalent:

agr( $x > 0$ ) {  
    likho "Positive"; }

## 2 - Keywords

Keyword	Equivalent	Example Usage
agar	if	agar ( $x > 0$ )
narna	else	narna
jabtak	while	jabtak ( $x < 10$ )
dohrana	for	dohrana ( $i = 0, i < 5, i++$ )
likho	print / cout	likho "Hello"
pao	cin	pao number
kaam	function	kaam sum()
wapas	return	wapas 1
jab	switch	jab (choice)
hal	case	hal 1; likho "Yes"
zukjao	break	zukjao
jari	continue	jari
agarbhi	else if	agarbhi ( $x == 0$ )
shuru	begin	shuru {
Khatam	end	Khatam }

Date - - - - -

Theme: Blending the art of Urdu expression  
with the structure of modern C++ syntax.

Purpose: To make programming feel like  
storytelling in Urdu logical yet expressive.

## Data Types of teknleeg++:

Data Type	Equivalent in C++	Usage
adad	int	Used for storing whole eg. Adad umur=20;
chhotaadad	float	used for small decimal number e.g. chhotaddad num=28.6;
baradad	double	Used for precise or large decimal values eg Baradad pi=3.14159;
harf	char	used for single character eg. harf grade = 'A';
jumla	string	used for words or text e.g. jumla name="Ali";
haqeeqat	bool	Used for true/false conditions.
khali	void	Represents no value, used in functions, eg. khali dikhao();
adadisilaila shanakhtinumber	array enum	used for arrays. used for creating custom values days.
khuaka	struct	used for grouping variables under one name.

Date

khazana

class

Equivalent to c++

ishara

pointer

class

points to memory  
address.

NOTE BOOK

### 3) Operators and Punctuations

Category	Symbol	Description
operator	+	Addition
operator	-	Subtraction
operator	*	Multiplication
operator	/	Division
operator	= =	Equality check
punctuation	;	statement terminator
punctuation	{ }	Block delimiters
punctuation	( )	used in conditions and functions

Other Operators: +>, <+, <>, <>, <=, >=, =, !=, ++, --

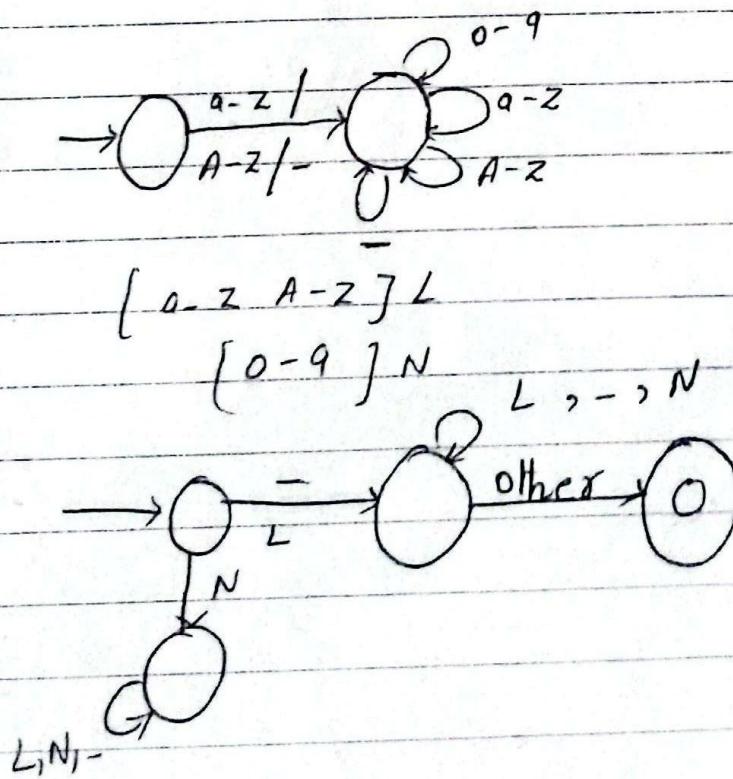

### 4) Regular Expressions

Token Type	Regular Expression	Example
Identifier	[a-zA-Z_]+.[0-9 a-zA-Z_]*	umar, totalMarks, result{
Number	(+/-)? [(0-9)+, (0-9)*(.) (0-9)+]	23, 45, 12.5, 3.14
Operators	= =   + >   < +   < >   < =   > =   ! =   + +   --   -   +	a+b, a-b, c * d
Datatypes	Adad / chotaAdad / BaraAdad / Harf / Jumla / Haqeeqat / Khali	Adad num = 12;

String Literal	<code>\\"[^\\"]*\\"</code>	"Hello Dunyia"
Punctuation	<code>[\\(\\)){}\\;]</code>	;, (, )
White space	<code>[\\t\\n\\r]</code>	space, tab
SL Comment	<code>/*[^\\n]*</code>	
Multi line comment	<code>/*([^{^*}]</code>	<code>/* This is comment */</code>
Whitespace	<code>(\\t\\n\\r)+</code>	space, \t(\tab)

## 5- Finite Automata Diagrams:

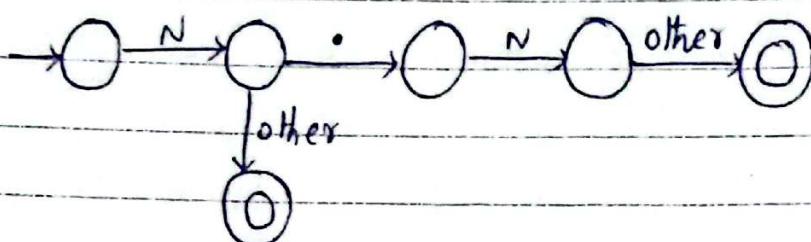

## (a) Identifier Automata:

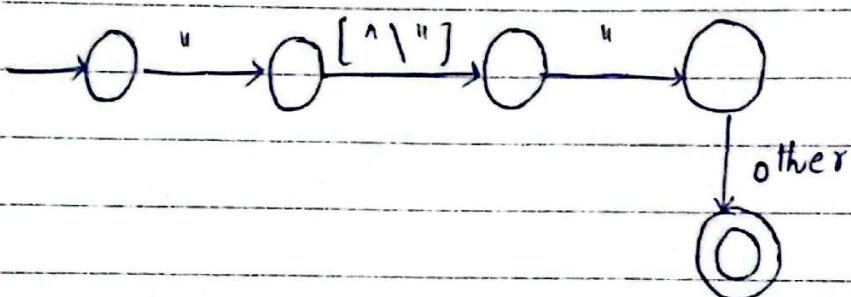

Date \_\_\_\_\_

(b) Integer automata

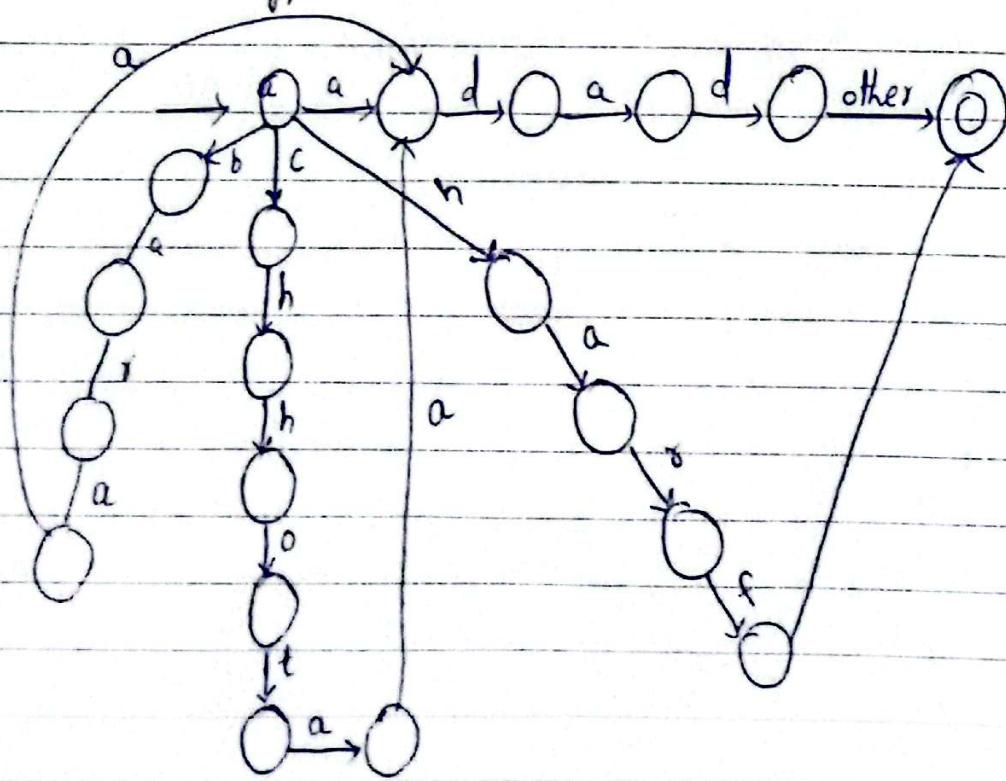

$$[0-9]^+ \rightarrow N$$

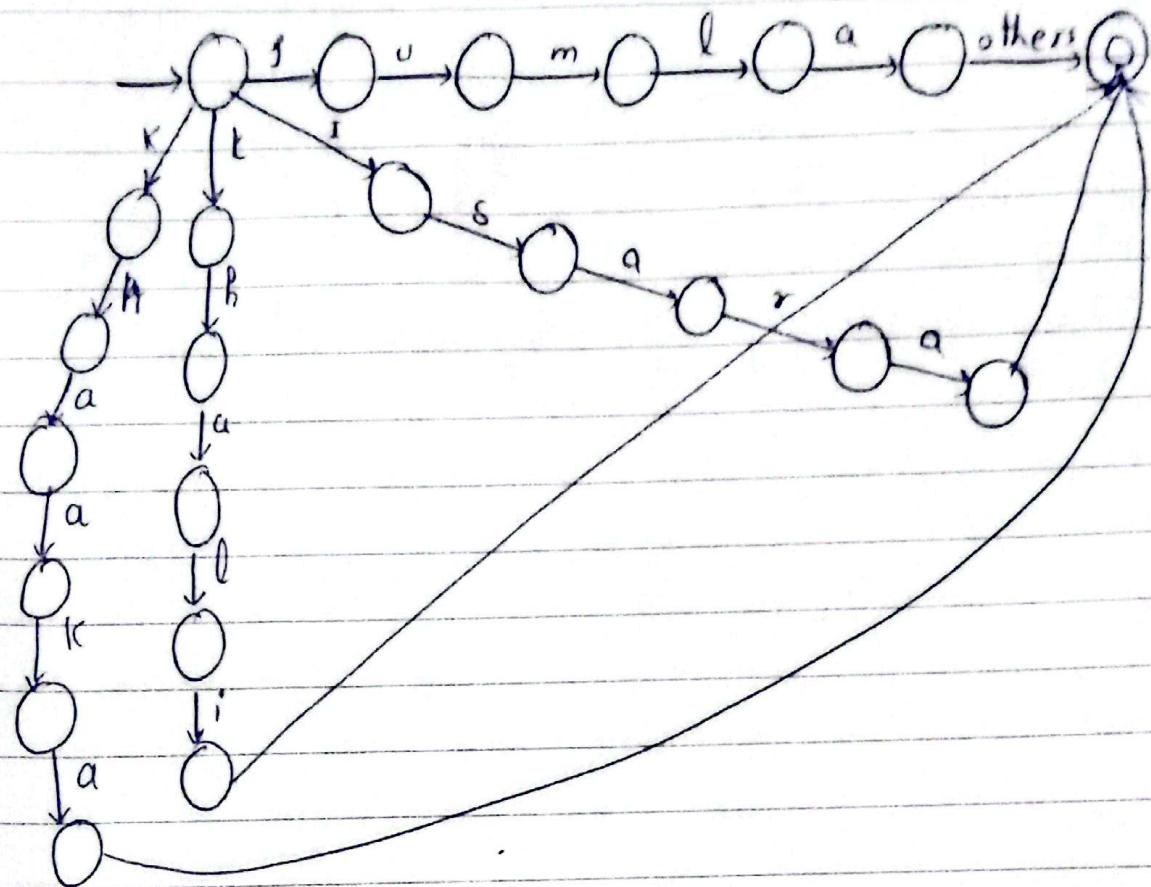

(c) String Automata:

4) Datatypes

HERO  
NOTEBOOK

## Explanation:

Why i choose Urdu keywords:  
I choose urdu keywords so that new learners can understand logic and program flow more easily. Words like "agar" if and "warna" (else) help make coding feel natural to urdu speakers.

Date

What makes Tekhleeg++ unique?

- Uses Urdu transliterated syntax, bridging the gap between logic and language.
- keep c++ structure
- Easy readability for beginners in Pakistan.
